ACHI

Automated clinical coding
Our AI driven Aircoder platform is one of a kind

Synapse®

Let us get you paid quicker – whilst saving your facility time, resource and much needed healthcare spend in addition to removing human error.

It took over 10 years to automate what they said couldn't be automated! Aircoder was launched in December 2019 and is the future of clinical coding.

This unique software product is now used in Australia, the UAE, Kenya, The Kingdom of Saudi Arabia, and the US with further expansion planned in 2022.

Aircoder is a powerful machine that has automated clinical coding. Aircoder works with any coding system or rules set and learns your nuances as it goes, getting better and better the more you feed it.

"Aircoder is the solution for coding today and tomorrow. We can't train coders to meet the demand. Fortunately, we don't need to. Aircoder is a critical partner as we deliver early detection surveillance of pathogens to prevent future pandemics."

Michele Tarnow, President & CEO, Alliance Care Technologies

Key Features

- Codes to any code set – ICD –9,10, 11 (AM or CM and any version), CPT, ACHI, Snomed-CT

- Applies coding rules.

- Includes over 10 years of actual data written by doctors from multiple countries

- Bulk upload thousands of episodes and it will code them while you sleep!

- In-built confidence algorithm – our team works in the background teaching the system when a low confidence rating is returned.

- Fully supervised system with no extra work or cost to you. A perfect hybrid of artificial intelligence and first-class service delivery.

- Comprehensive reporting.

- Handles misspellings, contextual relevance, age and gender and even different geographies

- Perfect for high volume settings such as outpatients.

- Aircoder does not need coders to input data

- Integration available with any EMR or Grouper
